

Tropical Storm MARIA QuickLook Posted: 18:00 EDT 09/26/2017

NOAA and NOAA Partnership Stations Relative to the Storm

Storm Analysis

As of 9/26/2017 18:00 EDT, water levels along the Atlantic coast from Springmaid Pier, SC to Wachapreague, VA including the entrance to Chesapeake Bay are elevated and range between 1 and 2 feet above normal tide levels. Within Pamlico Sound, water levels at USCG Hatteras, NC are presently measuring about 2.3 feet above Tide Predictions. Water levels at Oregon Inlet Marina, NC are only slightly elevated by about 0.3 feet above normal tide levels.

Wind speeds are increasing along the mid-Atlantic coast from Beaufort, NC to Wachapreague, VA with speeds ranging from 20 to 35 knots. Gusts of 35 to 45 knots have been measured from Beaufort to Duck, NC. Barometric pressure is falling across the region.

Water Level and Meteorological plots available below are updated automatically. A line denoting Mean Higher High Water (MHHW) is displayed to provide an approximate indication of when flooding inundation may occur.

For additional real-time and historical inundation information for select stations affected by this storm, please see Coastal Inundation Dashboard.

For additional data, please see the Center for Operational Oceanographic Products & Services website. For more information or archived products and reports, please see the Storm QuickLook Homepage.

SELECT NATIONAL HURRICANE CENTER ADVISORY INFORMATION:

Tropical Storm Maria Advisory Number 43
NWS National Hurricane Center Miami FL AL152017
500 PM EDT Tue Sep 26 2017

...MARIA CONTINUES TO MOVE SLOWLY NORTHWARD...

SUMMARY OF 500 PM EDT...2100 UTC...INFORMATION

LOCATION...34.1N 73.0W
ABOUT 160 MI...260 KM ESE OF CAPE HATTERAS NORTH CAROLINA
MAXIMUM SUSTAINED WINDS...70 MPH...110 KM/H
PRESENT MOVEMENT...N OR 360 DEGREES AT 7 MPH...11 KM/H
MINIMUM CENTRAL PRESSURE...974 MB...28.77 INCHES

WATCHES AND WARNINGS

CHANGES WITH THIS ADVISORY:

None

SUMMARY OF WATCHES AND WARNINGS IN EFFECT:

A Storm Surge Warning is in effect for...

* Ocracoke Inlet to Cape Hatteras

A Tropical Storm Warning is in effect for...

* Bogue Inlet to the North Carolina/Virginia border

* Albemarle and Pamlico Sounds

A Storm Surge Watch is in effect for...

* Cape Lookout to west of Ocracoke Inlet

* North of Cape Hatteras to Duck

A Storm Surge Warning means there is a danger of life-threatening inundation, from rising water moving inland from the coastline in the indicated locations. For a depiction of areas at risk, please see the National Weather Service Storm Surge Watch/Warning Graphic, available at hurricanes.gov. This is a life-threatening situation. Persons located within these areas should take all necessary actions to protect life and property from rising water and the potential for other dangerous conditions. Promptly follow evacuation and other instructions from local officials.

A Tropical Storm Warning means that tropical storm conditions are expected somewhere within the warning area.

A Storm Surge Watch means there is a possibility of life-threatening inundation, from rising water moving inland from the coastline in the indicated locations. For a depiction of areas at risk, please see the National Weather Service Storm Surge Watch/Warning Graphic, available at hurricanes.gov.

For storm information specific to your area, including possible inland watches and warnings, please monitor products issued by your local National Weather Service forecast office.

DISCUSSION AND 48-HOUR OUTLOOK

At 500 PM EDT (2100 UTC), the center of Tropical Storm Maria was located near latitude 34.1 North, longitude 73.0 West. Maria is moving toward the north near 7 mph (11 km/h), and this general motion with some decrease in forward speed is expected through tonight. A turn toward the north-northeast is expected on Wednesday, and a turn toward the east-northeast is anticipated on Thursday. On the forecast track, the center of Maria will pass east of the coast of North Carolina during the next day or so.

Maximum sustained winds have decreased to near 70 mph (110 km/h) with higher gusts. Some slight weakening is forecast during the next day or two.

Maria is a large tropical storm. Tropical-storm-force winds extend outward up to 230 miles (370 km) from the center. NOAA buoy 41025 located about 15 miles southeast of Cape Hatteras recently reported a sustained wind of 40 mph (65 km/h) with a gust to 52 mph (83 km/h). A wind gust to 41 mph (66 km/h) was recently reported at Manteo, North Carolina.

The latest minimum central pressure reported by a NOAA reconnaissance aircraft is 974 mb (28.77 inches).

HAZARDS AFFECTING LAND

WIND: Tropical storm conditions are expected within the warning through Wednesday.

STORM SURGE: The combination of a dangerous storm surge and the tide will cause normally dry areas near the coast to be flooded by rising waters moving inland from the shoreline. The water is expected to reach the following heights above ground if the peak surge occurs at the time of high tide...

Cape Lookout to Duck including the sound side of the Outer Banks...2 to 4 ft

Surge-related flooding depends on the relative timing of the surge and the tidal cycle, and can vary greatly over short distances. For information specific to your area, please see products issued by your local National Weather Service

forecast office.

RAINFALL: Maria is expected to produce total rain accumulations of 1 to 2 inches over the Outer Banks of North Carolina through Wednesday.

SURF: Large swells generated by Maria are affecting much of the east coast of the United States. These swells are also affecting Bermuda, the Turks and Caicos Islands, and the Bahamas. These swells are likely to cause life-threatening surf and rip current conditions. Please consult products from your local weather office for more information.

NEXT ADVISORY

Next intermediate advisory at 800 PM EDT.

Next complete advisory at 1100 PM EDT.
